**Retail & E-Commerce**

**PostgreSQL • SQL • Power BI • Git • GitHub**

**Version 1.0 | August 2026**

## **1. Dashboard Overview**

The Power BI dashboard brings together sales, customer, product, and campaign analysis in one place.

It is designed to help users quickly understand overall performance and explore the main factors affecting sales and customer behavior.

## **2. Dashboard Pages**

### **Page 1 — Executive Overview**

Provides a high-level view of overall sales performance.

#### **Key metrics and visuals include:**

- Total Revenue
- Total Orders
- Total Customers
- Average Order Value
- Monthly Revenue Trend
- Monthly Orders Trend
- Top 10 Departments
- Top 10 Products

### **Page 2 — Sales Drivers Analysis**

Focuses on customer behavior and the main drivers of sales.

#### **Key analysis includes:**

- Repeat Customers
- Repeat Customer Rate
- Average Basket Size
- Revenue by Age Group
- Top 10 Customers by Revenue
- Top 10 Commodities
- Revenue by Brand

## **Page 3 — Marketing & Campaign Analysis**

Focuses on campaign reach and customer response.

### **Key analysis includes:**

- Targeted Customers
- Redeemed Customers
- Redemption Rate
- Campaign Reach
- Redeemed Customers by Campaign Type
- Campaign Redemption Rate
- Targeted vs. Redeemed Customers

## **3. Key Business Insights**

### **Sales Performance**

Sales trends help identify periods of stronger or weaker revenue and order performance.

### **Product Performance**

High-performing products and departments account for a significant share of total sales, indicating that revenue is concentrated among a smaller group of products.

### **Customer Behavior**

Repeat purchasing and customer-level revenue analysis help identify valuable customers and provide opportunities to improve customer retention.

### **Brand Performance**

Comparing National and Private brands provides a clearer view of their contribution to overall revenue and customer purchasing patterns.

### **Campaign Performance**

Campaign targeting and coupon redemption analysis helps evaluate how effectively campaigns reach customers and generate responses.

## **4. Business Recommendations**

Based on the analysis, the following areas can be considered:

### **1. Focus on High-Performing Products**

Maintain strong availability and promotional focus on products and departments that contribute significantly to revenue.

## **2. Improve Customer Retention**

Identify high-value and repeat customers and consider targeted retention offers to encourage continued purchases.

## **3. Review Campaign Effectiveness**

Compare campaign types based on targeting and redemption performance and prioritize campaigns that generate stronger customer responses.

## **4. Monitor Brand Performance**

Track National and Private brand performance to understand changing customer preferences and identify growth opportunities.

## **5. Dashboard Interactivity**

The dashboard includes:

- Interactive filters
- Cross-filtering
- Page navigation
- Top-N analysis
- KPI cards
- Tooltips
- Interactive visual exploration

These features allow users to move from an overall business view to more detailed analysis.

## **6. Business Value**

The dashboard provides a single view of key sales, customer, product, and campaign metrics.

It helps users:

- Monitor sales performance
- Identify important revenue drivers
- Understand customer behavior
- Evaluate product and brand performance

- Compare campaign effectiveness
- Support data-driven decisions

## **7. Conclusion**

The Power BI dashboard transforms retail transaction data into an interactive business analysis tool.

By combining sales, customer, product, and campaign insights, the dashboard provides a clearer view of business performance and highlights areas that may need further attention.
